Comment: Proposed Aries-Helios 765kV Powerline and Substations Upgrades - Deviation

25 May 2016

Subsequent to the completion of the terrestrial fauna report for this project, James Harvey has been requested to consider and comment on a proposed additional route deviation – Deviation 3D.

Deviation 3D has been evaluated, and is unlikely to cause significant impacts on terrestrial fauna (mammals, amphibian and reptiles), and its effects are expected to be similar to those assessed in the original study. It is therefore recommended that the recommendations provided in the initial study are followed for this component.

Yours faithfully

James Harvey
